Background: The "pick up the ball" system requires distribution facilities such as vehicles and special storage areas that guarantee the quality of vaccines, using the door-to-door method to speed up and reach more residents who need to get vaccinated directly at the home of the vaccine participant.

Methods: A cross-sectional study with a retrospective approach. This study collected data in 2 districts in Yogyakarta's special regency: the Kulon Progo district and the Gunung Kidul district. The sample for this study was drawn from a community of 249 vaccine recipients using random sampling. The original questionnaire for the factors was used. The pilot study results for the validity and reliability test for the
